

ISSUE: 'curl: not found File does not exist' error when installing AhsayOBM v7 on Linux/FreeBSD using CLI

Article ID : 5230

Reviewed : 23/01/2017

Product Version:

AhsayOBM: 7.5.0.0 or above

OS: Linux

Problem Description

When performing an AhsayOBM installation on Linux/FreeBSD CLI using the script installer following error is shown:

```
# sh obm-nix-443-10.3.1.8-https.sh Log Time: Fri Jan 20 19:38:56 HKT 2017
Downloading package app-common.tar.gz... obm-nix-443-10.3.1.8-https.sh: curl:
not found File does not exist Failed to download component files. Error in
downloading files, installer will terminate
```

Cause

The 'curl' software package is not installed on the Linux/FreeBSD machine. As the AhsayOBM v7 installation script on Linux/FreeBSD requires the 'curl' package to download the software components from the AhsayCBS server.

Note: Other dependencies include 'tar' package and 'rpm' package (for AhsayOBM rpm installation on Linux)

Resolution

Install the 'curl' package on the Linux/FreeBSD machine and run the AhsayOBM installation script again.
