

# ISSUE: BACKUP DATABASE permission denied in database (MS SQL database backup)

**Article ID:** 5298

**Reviewed:** 02/02/2018

**Product Version:**

AhsayOBM: Post-7.3.0.0

OS: Windows

## Problem Description

When performing a MS SQL database backup (ODBC backup mode), the following warning message is received in the backup report:

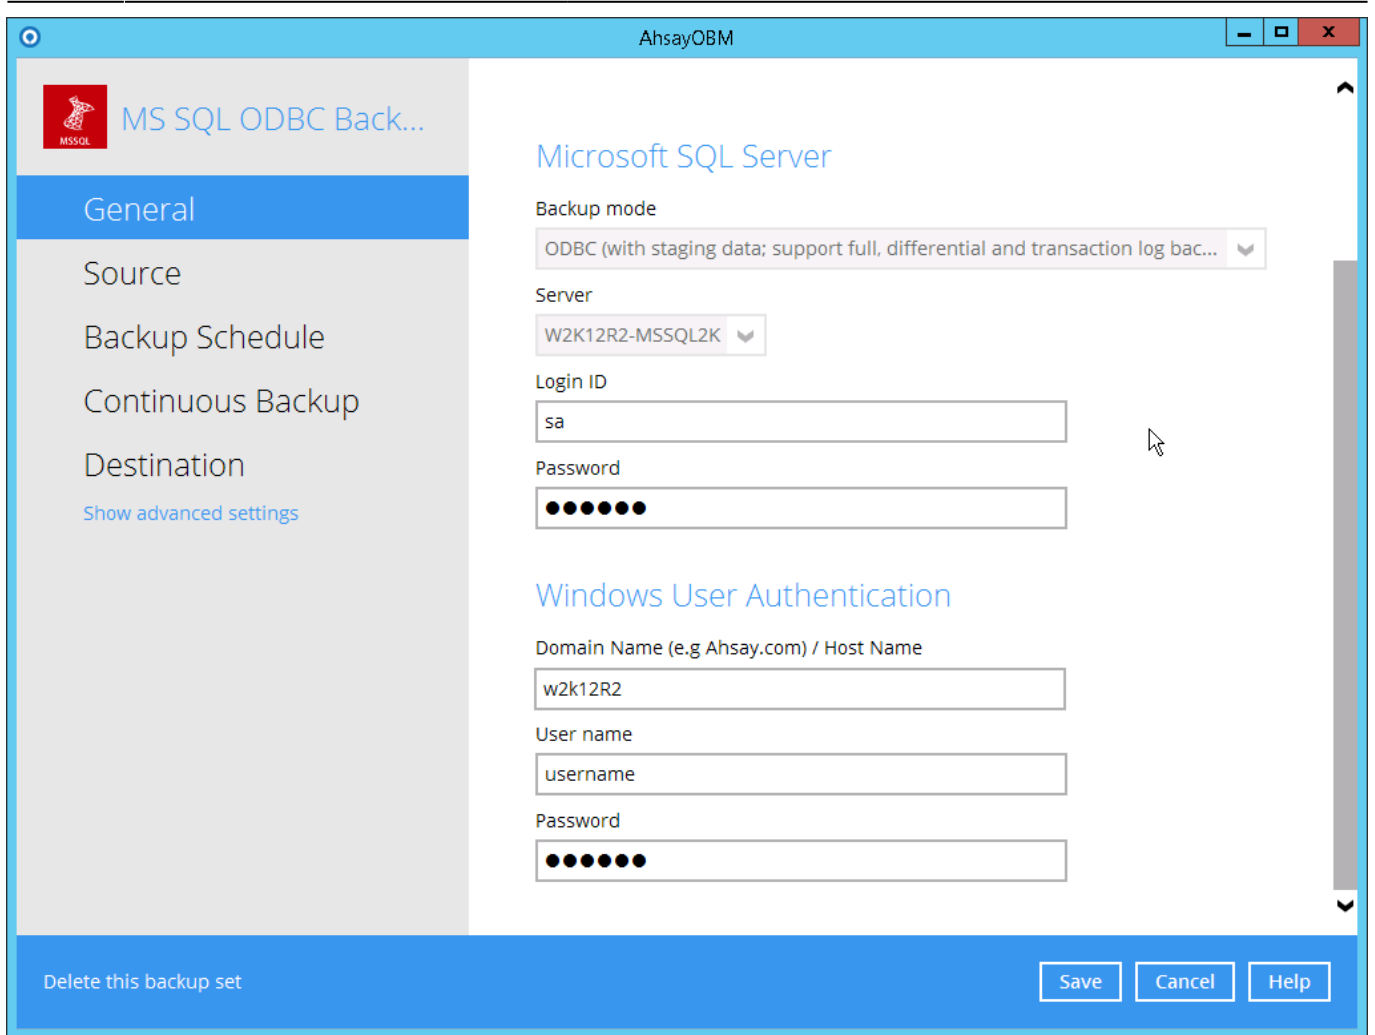

No.	Type	Timestamp	Log
*	...	...	...
*	info	...	[Start] Backing up "SQL_hostname\MSDB\db_name" ... to "temp_path"
*	warn	YYYY/MM/DD hh:mm:ss	[Microsoft][ODBC SQL Server Driver][SQL Server] BACKUP DATABASE permission denied in database 'db_name'.
*	...	...	...

## Cause

The message suggests that AhsayOBM does not have permission to access the affected database.

## Resolution

To resolve the issue, ensure that the **sa** account login credentials are correct (if SQL Server and Windows Authentication mode is used), and the operating system account specified in the **Windows User Authentication** setting has permission to access the affected database.

## Keywords

sql, odbc, permission, deny, denied, sufficient, in-sufficient, enough, mssql
