Description

After upgrading the backup server from version 6 to 8.1 or above, how do I run a Cyclic Redundancy Check (CRC) for legacy backup set that was created in version 6?

Steps:
To perform a Cyclic Redundancy Check (CRC) for a backup set, you can use the RunSingleUserRebuild.do API with the "CheckCrc" option enabled:

Note: This article assumes that the reader has basic knowledge on JSON (JavaScript Object Notation).

Parameters of RunSingleUserRebuild.do:

Timestamp	Login Name	Owner	Type	Message
...	...	...		...
YYYY-MM-DD hh:mm:ss	username		RoutineJobInfo	Rebuild-username Starting single user rebuild

When the rebuild job is completed, the following log entry can be found:
