

AhsayCBS Replication Module

AhsayCBS Replication Module offers close to real time replication of user data hosted on the Backup Server, so that when your live AhsayCBS Backup Server is out of service, you can [switch the Replication Server into Backup Server](#) so as to keep your backup service uninterrupted. Alternatively, you can also choose to restore the backed up data from Replication Server when your Backup Server machine is recovered.

Issues

- "Failed to mkdirs, path: settings, (com.ahsay.afc.cloud.d: [RpsManager.list] Failed to list path: . Reason: Precondition Failed)" error is shown on AhsayCBS when enabling replication to another AhsayCBS server
- "Failed to mkdirs, path: settings, (com.ahsay.afc.cloud.d: [RpsManager.list] Failed to list path: . Reason: java.net.ConnectException: Connection timed out: connect)" error when enabling replication to another AhsayCBS server
- "Failed to mkdirs, path: settings, (com.ahsay.afc.cloud.d: [RpsManager.list] Failed to list path: . Reason: java.net.ConnectException: Connection refused: connect)" error when enabling replication to another AhsayCBS
- Replication traffic limit does not work when set to 0 Kb/s (data are still replicated)
