Description

After upgrading the backup server from version 6 to 8.1 or above, how do I run a Cyclic Redundancy Check (CRC) for legacy backup set that was created in version 6?

Steps:
To perform a Cyclic Redundancy Check (CRC) for a backup set, you can use the RunSingleUserRebuild.do API with the "CheckCrc" option enabled:

Note: This article assumes that the reader has basic knowledge on JSON (JavaScript Object Notation).

Parameters of RunSingleUserRebuild.do:

| Timestamp | Login Name | Owner | Type | Message |
|------------------------|------------|-------|----------------|-----------------------------------------------------|
| ... | ... | ... | ... | ... |
| YYYY-MM-DD hh:mm:ss | username | | RoutineJobInfo | Rebuild-username Starting single user rebuild |

When the rebuild job is completed, the following log entry can be found:
