

[V7] ISSUE:"[New File] File="/filename01" Error="["IOException] [NixUtil.c][read] Invalid argument" when backing up files on Linux machine

Article ID	Reviewed	AhsayOBM	Operating System
5273	2017-08-21	7.5.0.0 to 7.x	Linux

ATTENTION 1st January, 2022: v7 officially End-of-Life [\[details\]](#)

Problem Description:

When performing a file backup job with AhsayOBM on a Linux machine the following error is shown in the backup log **Error="["IOException] [NixUtil.c][read] Invalid argument"**:

No.	Type	Timestamp	Log
*	erro	YYYY/MM/DD hh:mm:ss	[New File] File="/filename01" Error="["IOException] [NixUtil.c][read] Invalid argument"
*	erro	YYYY/MM/DD hh:mm:ss	[New File] File="/filename02" Error="["IOException] [NixUtil.c][read] Invalid argument"

Cause:

The **"Invalid argument"** error message is returned by the Linux operating system. It is related to the permission setting of the file or folder selected for backup.

Example:

The following files in the /selinux folder on CentOS 6 where the root account only has write access permission; **commit_pending_bools, disable, and load**. An "Invalid argument" error will be triggered even when root tries to read the contents of the file at the operating system level.

```
--w-----. 1 root root 0 Aug 17 15:54 /selinux/commit_pending_bools
--w-----. 1 root root 0 Aug 16 15:47 /selinux/disable
--w-----. 1 root root 0 Aug 16 15:47 /selinux/load
#
# cat /selinux/load
cat: /selinux/load: Invalid argument
```

Resolution:

To resolve this issue:

1. Exclude the affected files/folders from the backup source.

Keywords:

Linux, permission, selinux, file, folder, read permission, exclude, filter, backup source
